

SolderBuddy™

Ever chase a connector around your workbench while trying to solder it onto a cable? How many times has a phone plug rolled-over on you just as you zero in on it with the soldering iron? How about trying to hold the plug

between your knees while you solder it to your knees? Tingler Innovations SolderBuddy keeps the connector stationary so that you can concentrate on soldering to it leaving your knees available for other things.

SolderBuddy holds many different types of connectors, including XLR, 1/4" and .206", mini, and sub-mini phone plugs, phono (RCA) and two types of coaxial power connectors. SolderBuddy holds connectors for you during soldering. No more on-the-move wires or connectors. SolderBuddy gives you a steady platform for neatly attaching connectors to cables.

SolderBuddy weighs a hefty 12 ounces. It stays put. The connector stays put. If you have to make your own cables, you need a buddy, the SolderBuddy.
